

THAI ECONOMIC AND FINANCIAL UPDATE

for October 2023

Highlight:

The Thai economy continues to recover following a surge in income from the tourism sector. In terms of domestic demand, both consumption and private investment slowed slightly from the previous month. Merchandise exports, excluding gold, declined due to lower demand from trading partners. Meanwhile, industrial production remained steady despite a decline in automobile production.

Private Consumption

Seasonally adjusted private consumption indicators fell slightly from the previous month, reflecting lower spending on both nondurable and durable goods. However, spending in the services sector increased slightly, particularly in hotels and restaurants, correlating with increased spending by both domestic and international travelers.

Farm Income

Farm income continued to decline due to the fall in prices of key agricultural commodities, including livestock, rubber and palm oil. However, the production of agricultural products increased mainly from a low base.

Construction investment indicators increased slightly due to sales of construction materials, particularly sanitary ware and concrete piles.

In August, total vehicle sales were down 11.7%YoY due to a decline in sales of commercial vehicles in the 1-ton pickup category, the tenth consecutive month of decline. Due to declining farm income combined with high household debt, financial institutions have tightened credit and the rise in interest rates is impacting consumers' vehicle purchasing decisions. However, passenger car sales are increasing, in part due to the popularity of electric vehicles.
